

Victron Energy at the London Boat Show 2006

Victron Energy can speak of a successful London Boat Show 2006. The show, at its third edition in the modern Excel venue in the heart of London's Docklands presented yet again a great variety of attractions: an indoor watersports arena, a festival of the inland waterways, dockside demonstrations and of course over 800 exhibitors presenting their boat and craft.

Victron Energy UK was one of the exhibitors presenting the Victron product range: chargers, inverters, inverter-charger combinations, gel and AGM batteries, alternators and the new Victron Energy monitoring and control network solution: VE.Net.

Danny Jones, Sales Manager for UK speaks of a successful show. "Visitor numbers were down at the beginning of the show, perhaps the result of transport problems, but despite this the number of quality visitors was good. We made contact with a good number of potential new trade customers as well as handling many detailed enquiries for power systems. It is clear that the capabilities of MultiPlus are registering well with the market and that people are doing lots of research through the internet before they visit shows. Many OEM boat builders also visited our stand with very positive vibes being picked up for future business prospects. All in all, a good result."
